

Public Safety Radio Building Amplification System Design Certification

Please submit to the Building Inspector prior to Final Inspection.

This is to certify that a Radio Building Amplification System has been installed and tested in the following building in accordance with the Township Radio Building Amplification System Bylaw 2017, No. 5319, or it has been verified that the Radio Building Amplification System is not required in the subject building.

1 Project Information

Project address

City	Postal code	Building permit no.
------	-------------	---------------------

2 System Details

Please check all boxes in either Section A (if a system has been installed and tested) or Section B (system not required):

A Check both boxes if a system has been installed and tested

- The Radio Building Amplification System has been installed as per the Registered Professional's design and in accordance with the Public Safety Radio Building Amplification System Bylaw 2017, No. 5319.
- The Coordinating Registered Professional has been notified that the Radio Building Amplification System has been tested and is working as required by the Public Safety Radio Building Amplification System Bylaw 2017, No. 5319.

B Check both boxes if a system is not required

- The Building meets the requirements of The Public Safety Radio Building Amplification System Bylaw No. 5319 without requiring a system to be installed.
- The Coordinating Registered Professional has verified through field testing that a Radio Building Amplification System is not required to be installed in this building as per the Public Safety Radio Building Amplification System Bylaw 2017, No. 5319.
